

For this assignment, you will create a text-based game in Python

The game play/logic is up to you. Please refrain from using any offensive or overly violent topics.

The game MUST use functions (including a main function to run the program)

The game should include at least one main character/object that is represented by a Python dictionary

You can choose to include an inventory for your character which will most likely be another dictionary (see example in video)

The game must import and use the random and time Python libraries

The game may include emojis to make it more visually appealing

During game play, the main character's key:value pairs should change as the game is played (see example in video)

For this assignment, you will upload 3 documents:

- Your final_project.py file (the actual game code) - **60 points**
- All conversations with any LLM that assisted you in writing the program - **20 points**
- A demo of you playing your game one time through (no longer than 5 minutes) - **20 points**
 - If you are in an in-person class the demo will be done in class
 - For online classes, see assignment instructions in Canvas for how to record/upload your demo video

How to save your LLM conversations for submitting to Blackboard:

Student directions (ChatGPT → PDF → Canvas upload)

1. Open the ChatGPT conversation you used.
2. Scroll to the **top** so all messages load.
3. Press **Ctrl+P** (Windows/Chromebook) or **Cmd+P** (Mac).
4. Printer = **Save as PDF**.
5. **More settings** → **Background graphics** = **ON**.
6. Pages = **All** → **Save**.
7. **Filename:** `llm_docs_firstname_lastname.pdf`
8. Upload the PDF to this Canvas assignment.

Student directions (Claude → PDF → Canvas upload)

1. Open the Claude conversation you used.
2. Scroll to the **very top** and click any **"Show more"** toggles so the whole chat is visible.
3. Press **Ctrl+P** (Windows/Chromebook) or **Cmd+P** (Mac).
 - (Or click the **...** menu in Claude and choose **Print**.)
4. **Destination** = **Save as PDF**.
5. **More settings** → **Background graphics** = **ON**.
6. Pages = **All** → **Save**.
7. **Filename:** `llm_docs_firstname_lastname.pdf`
8. Upload the PDF to this Canvas assignment.
